25X1

1. SEB Bockfliess and SEB Matzen have a number of pumping sub-stations (Gewinnungsstationen) where the oil is pumped as soon as it is brought out of the ground. At these sub-stations, the water is allowed to settle out of the crude oil. The oil is then pumped into the tank farm northeast of Bockfliess (E 16° 38' - N 48° 22') and, from there, to Wifo Lobau.
2. SEB Bockfliess has five pumping sub-stations and SEB Matzen eight. Except for sub-station number seven at SEB Matzen, which has a pumping capacity of 900 cubic meters, all sub-stations in both of these fields have a capacity of 600 cubic meters. Each sub-station is equipped with a pump which has a capacity of approximately 40 cubic meters per hour.
